Build Future-ready Network Infrastructure

Moxa's industrial network solutions enable seamless OT/IT convergence and connectivity to create a digital future that can accelerate data collection and utilization to boost operational efficiency, innovation, and growth in every industry.

Moxa's comprehensive portfolio of industrial network solutions allows customers to optimize their networks now and into the future. Our solutions include products with industry-proven reliability, strong cybersecurity features, and advanced management visibility that simplify the integration of disparate and legacy systems. The result is an increase in communication efficiency and a reduction to the total cost of operations.

Enhanced Security, High Performance

The EDR-G9010 Series offers 10-port GbE performance and defense-in-depth security capabilities. It includes firewall/NAT/VPN protection and Layer 2 switching functions to meet bandwidth-hungry applications that require field-proven reliability and multi-layer security.

See pages 9-10

Visualize Wireless Networks

MXview Wireless expands network visibility to dynamic Wi-Fi connections and features client roaming playback to simplify wireless monitoring and troubleshooting. MXview users can now visualize wired and wireless networks for easy operations and to maximize uptime.

Layer 3 Scalability

The new MDS-G4000-L3 Series switches provide full-Gigabit modularity and layer 3 scalability to simplify complex network deployment. The hot-swappable media (RJ45, SFP, PoE) and power (HV, LV) modules offer hundreds of port combination to meet your network needs.

See pages 13-14

Smart Devices for IA Operations

The SDS-3000 series of 8/16-port industrial smart switches are some of the smallest in the world that can be monitored on HMI/SCADA systems, while keeping the configuration and operation easy and flexible. The slim, simple, and smart design makes the smart switch the best fit for control cabinets in smart manufacturing.

Strengthen the Defense of Your Industrial Networks

With cyberattacks targeting industrial networks more and more, it is crucial to identify and mitigate vulnerabilities before they can be exploited. Moxa provides holistic OT/IT integrated network security solutions to enhance your network defense against cyberthreats on two fronts.

One solution to reinforce your network infrastructure is to equip it with device-by-device and layer-by-layer security capabilities to ensure legitimate data traffic on the network remains safe.

You can also add Moxa's industrial cybersecurity solution to protect your critical assets and networks with specific OT protocol and packet inspection, as well as pattern-based protection against vulnerabilities.

Industrial Cybersecurity Solution

Moxa's industrial cybersecurity solution is specifically designed to secure industrial networks from both an OT and IT perspective.

The solution protects the network with a holistic cell-to-site defense approach to help you create a multi-layer defense for your industrial network.

IEC-G102-BP Series Industrial IPS/IDS

- Ultra-compact industrial security box with IPS/IDS
- Fine-grained policy enforcement with allowlisting control
- Bump-in-the-wire installation without impacting the network

IEF-G9010 Series Industrial IPS Firewall

- Compact, security-hardened, and rugged design
- Fine-grained Layer 2 to Layer 7 firewall policy with IPS capability
- Industrial NAT and network segmentation

Security Dashboard Console Security Management Software

- Centralized cybersecurity management with real-time dashboards
- OT visibility including device identification and network traffic analyzer
- Automatically deploy virtual patches without disrupting operations

Featured Products

EDS-(G)500E Series 8/10/12/16/18/28 Ports Layer 2 Managed Switches

- User authentication
- Network access control (port lock, sticky MAC, 802.1x, ACL)
- Network redundancy (STP/RSTP/Turbo Ring/Turbo Chain)

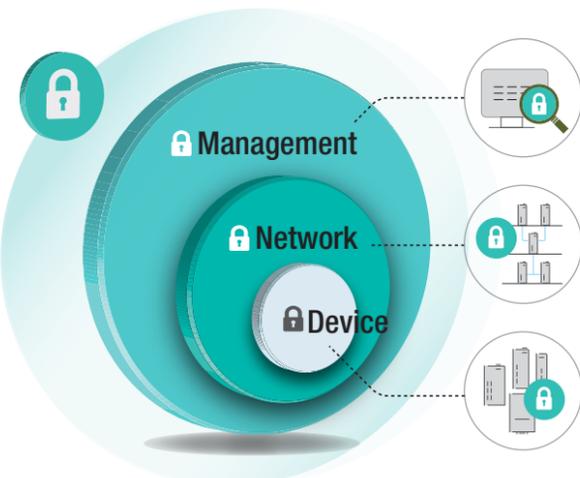

NPort 6000 Series Secure Terminal Servers

- Authentication servers (RADIUS/TACACS+)
- Set up devices easily with the Security Hardening Guide
- HTTPS (TLS 1.2 embedded)/SSH/SNMPv3

MXview Industrial Network Management Software

- Network security status at a glance
- Predefined security profiles
- Visualized console for security policy management

As the number of cyberincidents on ICS/SCADA networks continues to grow, industrial networks are no longer immune to internal or external cyberthreats.

Moxa Offers

- Centralized network and security management and remote connection management
- Secure network and edge connectivity with hardened industrial networking devices
- Protect critical assets with industrial IPS/IDS

Working in local area networks (LANs) is often taken for granted, but they are especially vulnerable while processing data and during communication.

► Moxa Offers

- All-in-one firewall/NAT/VPN/router/switch*
- Industrial VPN for end-to-end access
- Ethernet and cellular redundancy
- Security features based on the IEC 62443 standard
- Industrial-grade reliability

*L2 switching is only supported by the EDR-G9010 and EDR-810 Series.

Build Your **First-line** Network Defense

Secure routers are usually the first line of defense that help protect your network against cyberthreats. Moxa's industrial-grade routers and gateways provide wired and wireless secure network access to protect your critical networks and assets while maintaining fast data transmission rates.

High Security Meets High Throughput

Don't let cyberthreats stop your high-speed network operations. The EDR-G9010 Series secure routers bring 10-port full Gigabit connectivity and robust security features to safeguard critical assets on control networks and ensure safe remote access.

EDR-G9010 Series 10-port Gigabit Industrial Secure Router

- All-in-one firewall/NAT/VPN/router/switch
- 8-port TX GbE and 2-port SFP GbE
- Comprehensive redundancy mechanisms, including Turbo Ring and VRRP
- Advanced Deep Packet Inspection (DPI) for Modbus TCP/UDP and DNP3 traffic*

*Available in Q3, 2021.

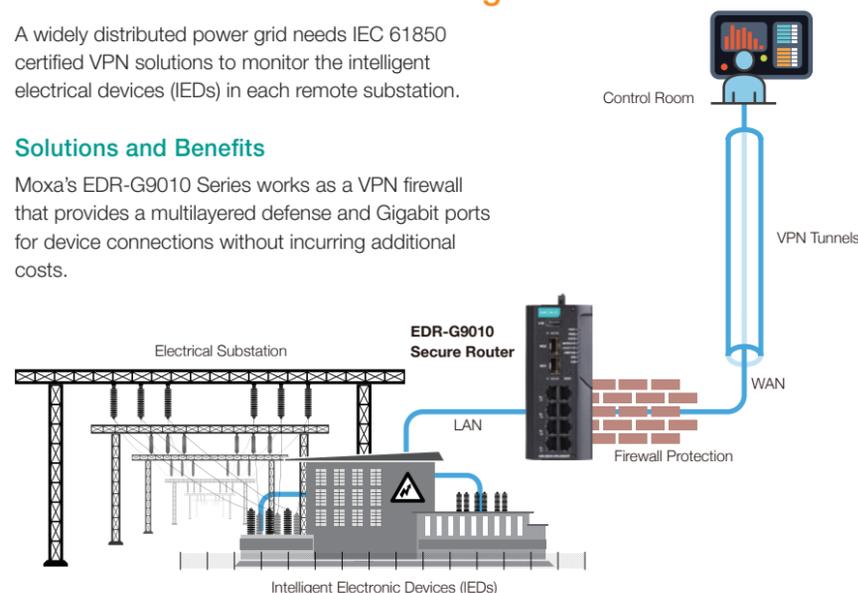

*DNV certification is available in Q4, 2021.

Secure Substation Monitoring

A widely distributed power grid needs IEC 61850 certified VPN solutions to monitor the intelligent electrical devices (IEDs) in each remote substation.

Solutions and Benefits

Moxa's EDR-G9010 Series works as a VPN firewall that provides a multilayered defense and Gigabit ports for device connections without incurring additional costs.

- Full Gigabit VPN routing and switching
- IPsec for data encryption
- Firewall for local network segmentation and data filtering
- Supports 120/240 VDC/VAC input voltage options*
- IEC 61850-3/IEEE 1613 certified

*Available in Q4, 2021.

Best Value
NAT-102*
Industrial NAT Device

Low-power LTE for Secure Remote Data Collection

Providing sufficient power and security to maintain remote and hard-to-wire network operations is a challenge. The slim and low-power OnCell 3120-LTE-1 gateways utilize LTE Cat 1 technology to facilitate long-lasting operations. The robust built-in VPN security and reliable cellular connectivity enable secure and uninterrupted long-haul data collection from serial and Ethernet devices.

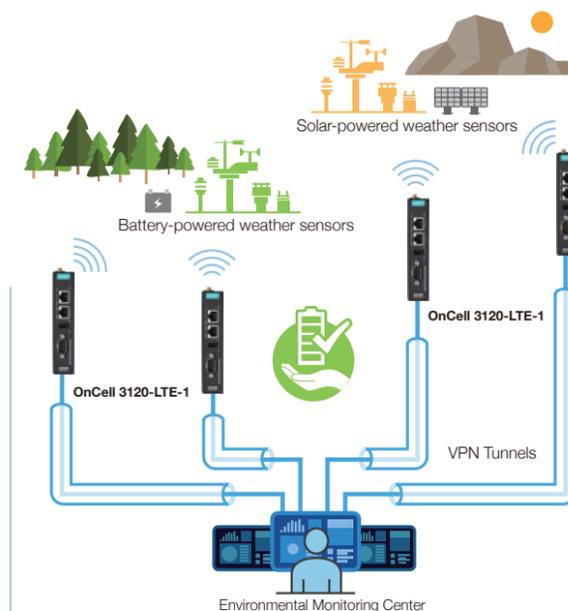

OnCell 3120-LTE-1 Series Industrial LTE Cat 1 Cellular Gateways

Reliable and Secure Connections

- IPsec, GRE, and OpenVPN for secure connections
- Dual-SIM and GuaranLink for reliable cellular connectivity
- WAN failover between cellular and Ethernet

Low-power Operation

- 4 W during normal operation and 40 mW when in standby
- Time Scheduling for power saving cycles
- Wakeup control via SMS

Environment Monitoring

Global LTE Connectivity

- Supports EU, US, and AU bands
- Supports global cellular operators including Verizon, AT&T, PTCRB, FCC ID, RCM, and KC

Friendly Deployment

- Serial/Ethernet-to-cellular flexibility
- Import configurations and upgrade firmware using the ABC-02 USB configuration backup and restoration tool

Rugged Design

- -30 to 70°C operating temperature
- ATEX, IECEx, and CID2 certified for use in hazardous locations

Secure Remote Connections for Maintenance and Collaboration

Remote access to PLCs, HMIs, and automation networks is becoming more common for many machine builders, industrial plants, and critical facilities. Moxa introduces the security-oriented Moxa Remote Connect (MRC) solution suite and service that provide strong data encryption and secure tunneling between your local and remote systems, leading to fewer site visits, better efficiency, and improved services for remote collaboration and predictive maintenance from anywhere.

Cloud server options

- Ready-to-go, free MRC Quick Link Service
- Privately-owned MRC server portal

It is better to be safe than sorry when it comes to granting remote access to company networks and assets.

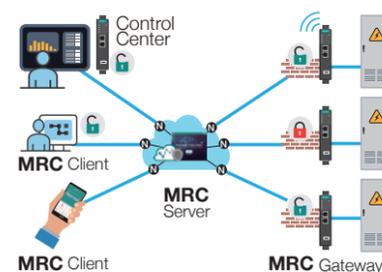

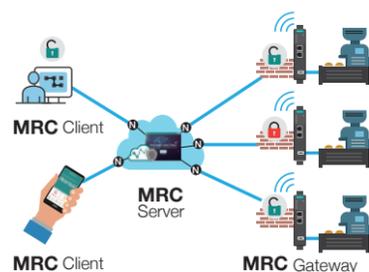

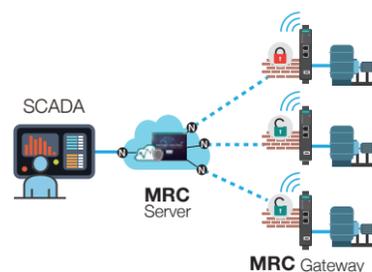

► Moxa Offers

- Supports wired and global LTE communications
- Security-oriented design for remote access
- Ready-to-go MRC Quick Link Service
- Supports private-owned MRC Server
- MRC Client mobile app* for monitoring the remote connection

*Available in Q3, 2021.

MRC Client

A Windows-based application installed on laptops/ computers to build a secure link to the MRC Server.

- Supports Windows 7/10
- Download for free from Moxa's website
- Mobile app for real-time connection monitoring

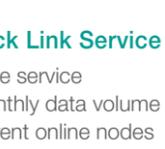

MRC Server

A cloud-based server that manages scalable secure connections between MRC gateways and MRC clients.

- Supports both the MRC Quick Link Service and privately-owned MRC server portals
- Flexible year-based license upgrades and extensions

MRC Gateways

Connect Ethernet-based machines to the MRC Server through secure tunnels over the Internet.

- Ethernet or LTE WAN connectivity
- Up to 25 local devices per gateway and support for site-to-site connections
- An embedded allowlist and firewall enable high levels of access control

MRC Suite

Moxa Remote Connect (MRC) is a cloud-hosted security platform consisting of MRC gateways, the MRC Server, and MRC Clients.

- Security with embedded firewall and allowlist for remote access control
- AES-256 encryption algorithm to protect data
- Smart IP mapping for easy field IP management

Why MRC, and how it works

Watch our video showing how MRC makes remote access easy, secure, and flexible.

Access Control Permissions

The MRC suite provides four types of access control to help users determine whether remote connection requests should be authorized or rejected.

Gateway Permission

Machine operators can use USB authorization keys to control which gateways can be remotely accessed.

Service Permission

Through the MRC Server, the server manager can restrict which services of the device can be remotely used.

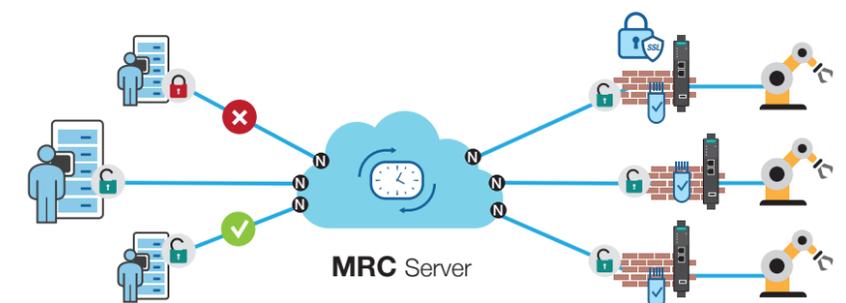

Client Permission

Server managers can specify which clients can access which machine.

Time Permission

Server managers can configure specific time frames during which MRC clients can access remote devices.

Every minute of system downtime is costly.

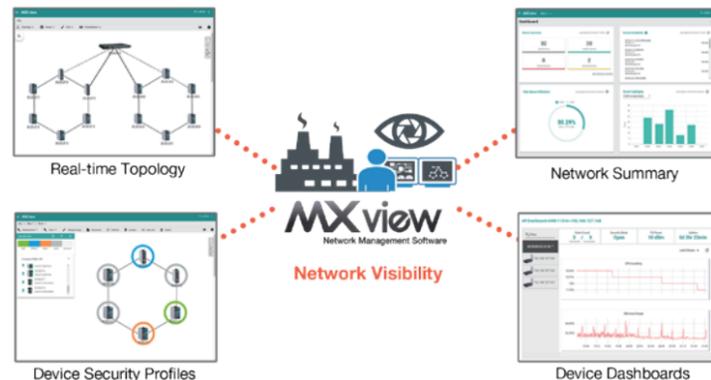

MXstudio provides real-time visibility to enable swift troubleshooting without the need for advanced IT expertise.

Gain **Visibility** to Boost Your Network Availability

MXstudio is an industrial network management software suite that provides full visibility and troubleshooting functions for OT networks to ensure maximum uptime throughout all stages of network deployment, management, and maintenance.

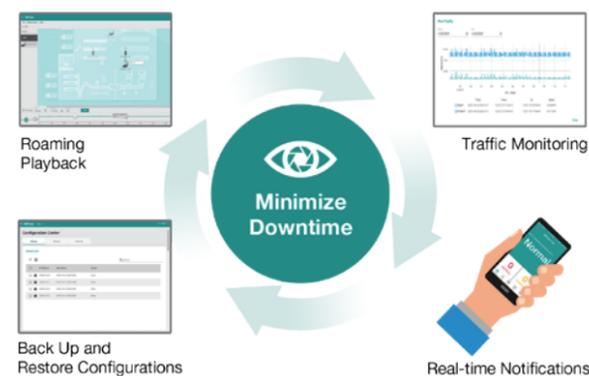

Visualization for Easy Operation

MXstudio features information-packed dashboards that offer more visibility into performance, network traffic, availability, events, and roaming history, all of which simplify network management. With the MXview Wireless add-on module, MXview extends this visibility to Wi-Fi networks, featuring dynamic topologies for at-a-glance monitoring.

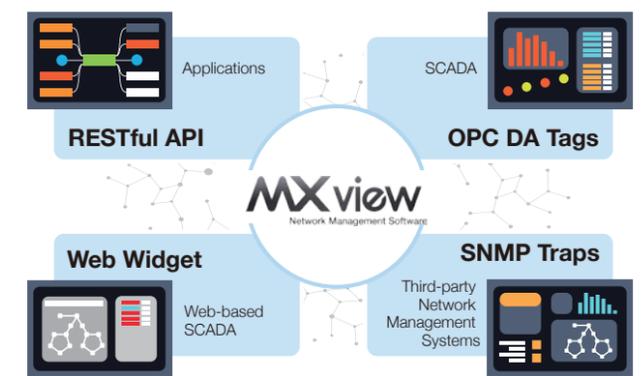

Network Insight for Uptime Optimization

MXstudio provides comprehensive analysis and historical data playback features, which help identify network issues more quickly and improve response rates for better operational uptime and performance.

Easy Integration Into Your IT/OT Systems

- Supports a web widget and RESTful API to embed MXview into SCADA systems and web-based applications
- Provides group health OPC tags for SCADA/HMI integration
- SNMP traps for third-party network management systems (NMS)

► MXstudio Series Industrial Network Management Suite An all-around solution to support you through all stages of your network's lifecycle.

Deployment

Deploying devices one by one is both time-consuming and error-prone.

Faster Mass Deployment

MXconfig speeds up network deployment through group configuration, duplication, and link sequence detection.

MXconfig

Industrial Network Configuration Tool

- Configuration is 10x faster than deploying switches one by one
- Link sequence detection eliminates manual configuration errors
- Security Wizard for device security setup and updates

Operation

Monitoring network health and traffic and responding to events is resource-intensive.

Smart Visualization

MXview provides a real-time visual overview of the network topologies that allows engineers to monitor and manage the networks more easily.

MXview

Industrial Network Management Software

- Automatic topology visualization
- Security View for viewing the security level of network devices
- SFP Fiber Check for fiber link status and warnings
- Dashboard view with a complete network summary
- Easy integration through RESTful API, web widget, OPC DA tags, and SNMP traps

Maintenance

Network backups require repetitive manual tasks that increase maintenance time, costs, and the risk of errors.

One-click Backup

MXview's Configuration Center supports one-click bulk configuration backup, allowing scheduled backups, firmware upgrades, and selectable rollbacks for easy maintenance.

- Schedule periodic configuration backups
- Comprehensive reports, including inventory, traffic, and availability reports

MXview Wireless Add-on Module

- Dynamic topology view for Wi-Fi networks
- Client roaming playback for troubleshooting
- Device dashboards and performance charts for wireless devices

Troubleshooting

Unstructured troubleshooting leads to delays and incorrect network diagnoses, wasting time and resources.

Quick Diagnostics

MXview facilitates event search and playback functions for easy event tracking. MXstudio's N-Snap utility enables one-click device information collection to help engineers identify and analyze changes to the network.

N-Snap

Industrial Network Snapshot Tool

- A standalone utility to take network snapshots for quick troubleshooting
- Automatically compares network and device data, and highlights the differences

Remote Monitoring

Having automation engineers monitor network screens 24/7 is inefficient and costly.

Mobile Monitoring

MXview ToGo sends alerts straight to your mobile device to keep you posted on the network status and events.

MXview ToGo

Mobile Monitoring Tool

- Real-time notifications to help reduce downtime
- Quickly check the status of networks and devices
- Search and map devices with one click

► Moxa Offers

- Live topology monitoring
- Roaming monitoring and playback for advanced wireless functions
- Mass configuration to save time and reduce errors
- Easily embed MXview into OT/IT systems
- Dashboard view with a complete network summary
- Mobile app and instant alerts

Utilize 10GbE to Empower Network Edge Performance

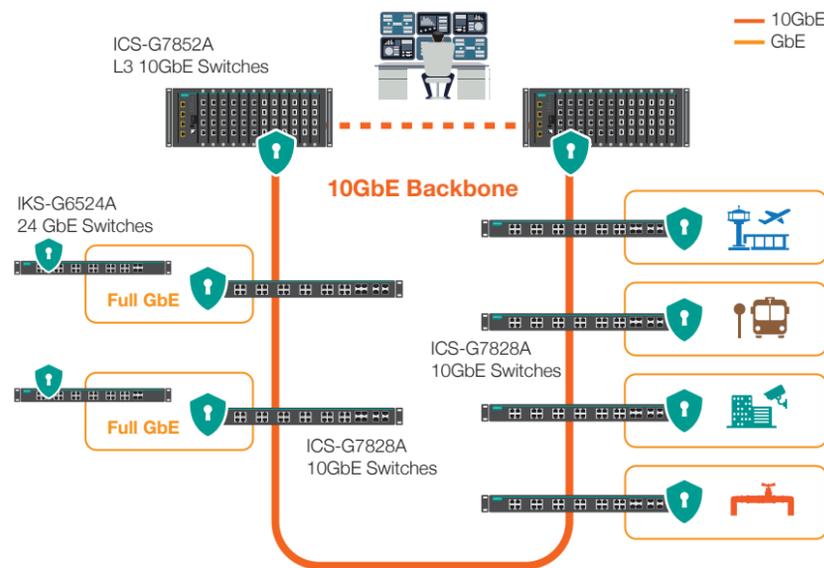

Moxa's industrial Ethernet rackmount switches boost your productivity with 10GbE/GbE performance, help protect against cyberthreats, and work reliably in harsh environments.

Moxa's rackmount switches, including both ICS Series 4U/1U and IKS Series, have high-density copper, fiber, and PoE interfaces with 10GbE/GbE/FE connectivity, industry-specified security features, and millisecond-fast failover recovery to reduce downtime and maximize productivity.

10GbE Edge Data Aggregation

Moxa's fixed and modular industrial rackmount switches enable 10GbE edge-to-core backbone convergence to simplify your network infrastructure.

- Enabling 10GbE edge-to-core backbone convergence
- Two or four 10GbE uplinks and up to 48 GbE uplinks
- Flexible combinations of 10GbE/GbE/FE for multiple network types
- SFP modules that allow data transmission of up to 120 km

Robust Reliability

Moxa's rackmount switches can connect to multiple endpoints for data aggregation in tough conditions. The rackmount switches allow you to increase uptime and lower the total cost of ownership (TCO).

- Network recovery times within milliseconds
- High MTBF values with no fan or heater
- Hot-swappable operation
- Dual-isolated power supply

IACS-level Security

To enhance endpoint security and protect data aggregation against cyberthreats, all of Moxa's industrial rackmount switches have IACS (Industrial Automation Control System) security features that are available via firmware updates.

- Enhanced network protection with built-in security features based on the IEC 62443 standard
- Security control for data and access protection
- Supports MXstudio for device security profiling and monitoring

Your network field infrastructure deserves 10GbE solutions that are tough enough to withstand harsh environments and enhance your network performance.

Moxa Offers

- Up to 4 10GbE and 48 GbE uplinks
- Fanless routers and switches
- Devices with -40 to 75°C operating temperature
- Security features based on the IEC 62443 standard
- High-level EMI/EMC shielding

Network Requirements

- High-capacity aggregation and long-haul transmission
- Network resilience for operational safety and security
- Flexible network deployment and expansion in outdoor conditions

Why Moxa

- ICS-G7828A switches provide 10GbE coupling and 10GbE uplinks for data aggregation at every station
- ICS-G7828A can operate in temperatures ranging from -40 to 75°C and supports up to 28 fiber ports for long distance transmissions
- Supports Turbo Ring and Turbo Chain technologies for flexible and redundant ring expansion and fast failure recovery in under 50 ms (up to 250 nodes)

Reliable Switches With Versatile Options

Moxa provides a wide array of field-proven DIN-rail managed switches to build rock-solid communication infrastructure. Our portfolio offers the flexibility to adapt to specific application requirements including installing new products in confined spaces, meeting power voltage requirements, and mitigating security threats.

Unreliable network equipment often increases maintenance costs and downtime. Therefore, we make every effort to ensure our network equipment is reliable to help reduce risk and errors.

► Moxa Offers

- A wide selection of fixed and modular managed switches
- Industry-proven reliability
- Millisecond-level network redundancy
- Security features based on the IEC 62443 standard

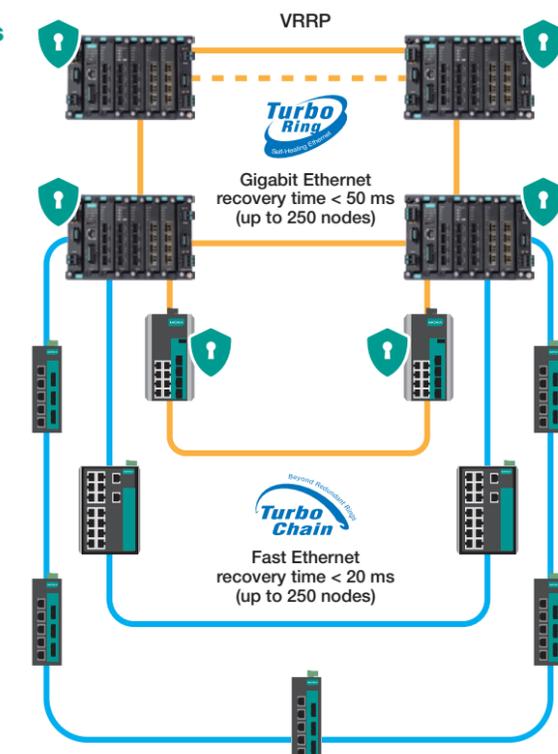

MDS-G4000-L3 Series
Layer 3 Modular Switches

L2/L3 Availability

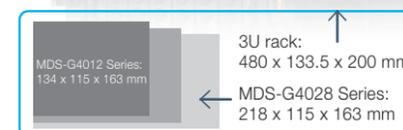

- Supports VRRP for automatic routing failover
- Turbo Ring for Fast Ethernet redundancy under 20 ms
- Turbo Chain for flexible and redundant ring expansion

Embedded Security

- Advanced security features based on the IEC 62443 standard (EDS-500E and MDS-G4000 Series only)
- Supports MXview to easily manage the security status of network devices

OT Interoperability

- Supports multiple industrial protocols for SCADA integration

Compact Design

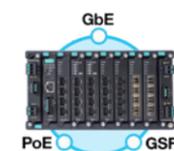

- All models are smaller than a 3U half-rack

► MDS-G4000 Product Family

Compact Modularity for Routing and Switching Scalability

Moxa has recently added the MDS-G4000-L3 Series, which includes Layer 3 routing functionality, to the MDS-G4000 product family. The MDS-G4000 product family was designed to maximize performance in ultra-compact casings and enable cross-network data aggregation for flexible scalability.

The MDS-G4000 product family includes a variety of hot-swappable media modules (RJ45, SFP, and PoE) and power units (24/48 VDC and 110/220 VAC/VDC) that allow for flexible configurations and nonstop continuity. The switches can be deployed to support mission-critical operations in applications such as oil and gas, substations, and mining.

Flexibility

- Up to 28-port Gigabit scalability allowing for hundreds of media combinations
- Up to 24 GbE PoE+ / 24 GSFP media options
- Supports DIN-rail, rack*, and wall-mounting options

*Only the MDS-G4028/G4028-L3 supports rack-mounting.

Continuity

- Hot-swappable power and port modules
- Passive backplane to minimize failure rates
- Power outage protection during firmware upgrades to avoid malfunctions

Availability

- Supports VRRP Layer 3 routing redundancy
- Supports Turbo Ring and Turbo Chain for Gigabit redundancy under 50 ms
- Dual isolated redundant power modules

Security

- Security features based on the IEC 62443 standard
- 3-level user security
- MAC-based IP assignment

Reliability

- A robust, industrial-grade design with superior vibration and shock resistance
- Compliant with multiple industry standards

Usability

- OT-friendly HTML5 dashboards for device summary, smart search, and configurations

Power Your Critical Surveillance Equipment With **Smart PoE** Switches

To address the growing connectivity and power requirements of surveillance infrastructure, Moxa's PoE/PoE+ Ethernet switches function as a power source. These switches provide up to 48 Gigabit PoE+ ports with either 36 W or 60 W per PoE+ link to power PTZ cameras and other wireless devices.

Unlike commercial PoE solutions, Moxa's PoE/PoE+ solutions boast cybersecurity features, millisecond-fast recovery, high EMI/surge protection, and -40 to 75°C operating temperature to keep surveillance networks up and running even in harsh environments.

"Less is more" is the beauty behind Moxa's PoE switches. They reduce the amount of cabling required while still providing high power and smart management to deliver data and PoE with a lower total cost of ownership.

► Moxa Offers

- IEEE 802.3af/at interoperability
- Up to 48 Gigabit PoE+ ports
- 4 kV LAN surge protection
- Smart PoE power management
- Security features based on the IEC 62443 standard

Power+

Moxa's PoE+ switches combine high power and high bandwidth to carry power, video, and data over Ethernet cables.

- 60 W and 36 W PoE+ outputs for PTZ and power-hungry IP cameras
- 12/24/48 VDC dual power inputs
- High PoE port density up to 48 ports

Management+

Built-in Smart PoE functions for remote PD links, diagnostics, and failure recovery.

- Supports PoE/PoE+ standard, non-standard, and legacy PDs for easy deployment
- Automatic PD check and reboot for fault-tolerant recovery
- Remote management by MXview or Web UI

Cybersecurity+

The PoE/PoE+ managed switches reinforce access authentication and control to protect the device and connected PDs.

- Device-level cybersecurity
- Supports system-level security integration for increased protection
- Supports MXstudio for network device security profiling and monitoring

► Showcase

60 W Compact Powerhouse

EDS-P506E-4PoE Series

2 GbE + 4 FE PoE+ switches

High-power PoE

- 4-port PoE/PoE+
- Up to 60 W output per port
- 180 W power budget

High Bandwidth

- 2-port Gigabit combo

Dual Power

- 12/24/48 VDC inputs

Smart Management

- Built-in Smart PoE for easy PD links, diagnostics, and monitoring
- LED indicators for maintenance

High Reliability

- Built-in device security
- Fast Ethernet recovery time < 20 ms
- Level 4 EMS immunity
- Models with -40 to 75°C operating temperature
- Industrial certifications

► Use Case

A Smart City Infrastructure

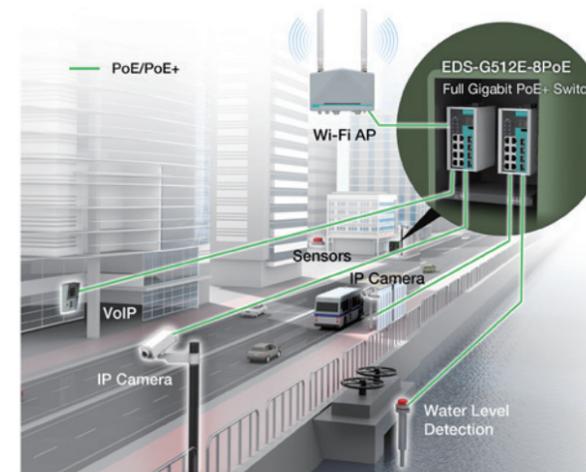

A city in Asia planned to upgrade their infrastructure by utilizing EDS-G512E PoE switches to integrate city surveillance, data collection, and public services.

System Requirements

- Reliable data collection and a strong power supply
- Uninterrupted network reliability
- Network protection against cyberattacks

Why Moxa

- 12-port Gigabit and high PoE+ output for bandwidth and power-hungry IP cameras and wireless APs
- Extreme robustness for reliable operation in challenging conditions
- Device-level cybersecurity for access protection

► Use Case

Optical Character Recognition (OCR) Systems

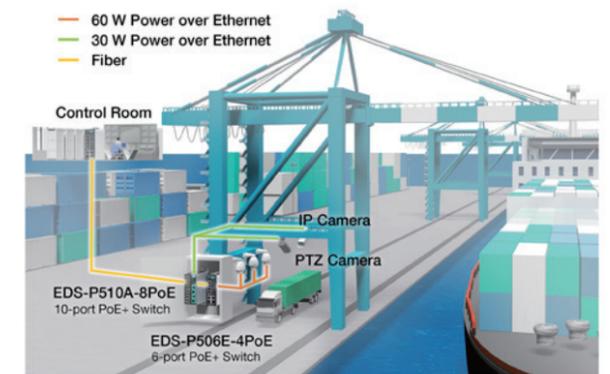

An OCR system required high-capacity PoE switches and IP cameras to facilitate automatic freight container loading, unloading, and tracking at port terminals.

System Requirements

- Withstand outdoor and salty air conditions
- High PoE output to support PTZ camera functions
- Easy deployment, management, and maintenance

Why Moxa

- The EDS-P506E-4PoE switches deliver up to 60 W per PoE link to power multiple PTZ cameras
- Fault-tolerant design that automatically performs failure checks of IP cameras and reboots them if needed
- Gigabit recovery under 50 ms for network availability

Network complexity and environmental limitations hinder the efficiency of industrial automation network deployment and maintenance for most IA engineers.

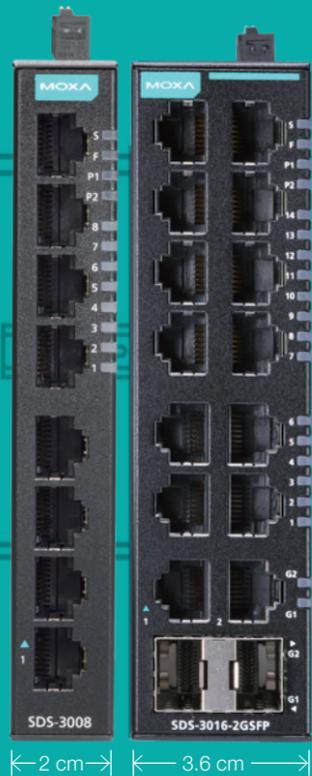

► **Moxa Offers**

- 8/16-port Ethernet smart switches
- The ideal managed switch functions for automation applications
- One-click profile setup for seamless SCADA/HMI integration
- Simple GUI for easy configuration and diagnostics
- Flexible mounting and slim design
- Industrial-grade reliability

Smart, Simple, Efficient Networking

Moxa's smart switches simplify daily tasks for industrial automation (IA) engineers with easy configuration and installation, interoperable communication, and ultimately, help reduce downtime.

The SDS-3000 switches have multiple mounting options to ensure they can be installed easily in a variety of applications. You can use either a web GUI or a rotary DIP switch to quickly select IA protocols and enable SCADA/HMI integration for monitoring and maintenance.

SDS-3008/3016 Series 8/16-port Smart Switches

- OT Management**
- One click to enable SCADA/HMI/NMS integration
 - Supports EtherNet/IP, PROFINET, and Modbus TCP protocols

- Robust Reliability**
- Security features based on the IEC 62443 standard
 - Supports RSTP/STP/MRP (Client) network redundancy
 - -40 to 75°C operating temperature (-T models)

- Ease of Use**
- One-page dashboard GUI for easy configuration and diagnostic reports
 - Rotary DIP switch for IA profile settings (SDS-3016 Series only)
 - Compatible with Moxa's ABC-02 configuration backup and restoration tool

► **Application Note**

Network Monitoring for Material Handling

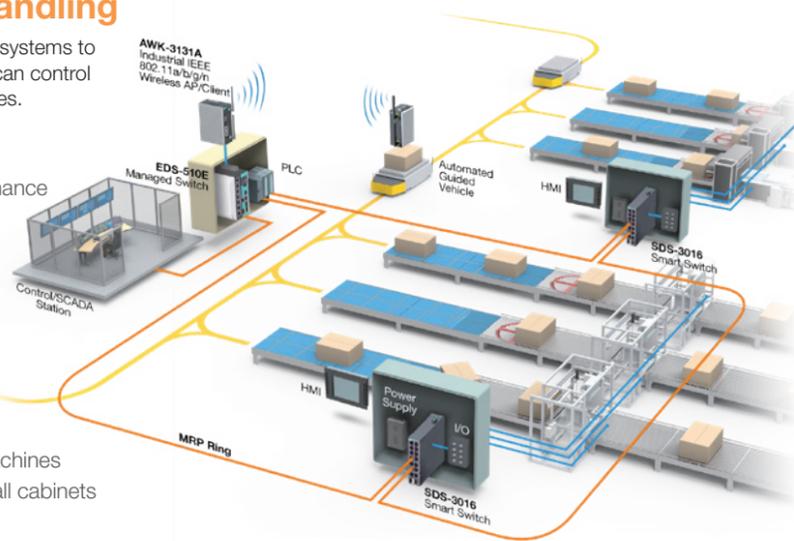

A material handling plant utilized Ethernet switches and PROFINET systems to build their operational infrastructure. As a result, their SCADA/HMI can control and monitor all processes, networking devices, and network statuses.

Network Requirements

- Minimal IT skills required for network deployment and maintenance
- Supports SCADA/HMI monitoring
- Reliable network performance
- Easy diagnostics for maintenance

Why SDS-3016 Smart Switches

- Just one click to enable PROFINET mode on the switches, allowing the network to be monitored through SCADA/HMI
- Supports MRP Client for rapid network redundancy
- A higher port count allows more data to be collected from machines
- Compact and flexible mounting design that fits easily into small cabinets

Gear Up Your Edge Network for Expanding Connectivity

With ultra-small versatile industrial unmanaged switches

To address the needs of rapidly expanding industrial networks, Moxa has developed a new series of industrial unmanaged Ethernet switches—the EDS-2000 Series—with an extra-small footprint that offer reliability, easy deployment, and flexibility for a variety of industrial applications.

Extra-small design for easy placement into control cabinets

Enhanced data efficiency via QoS and BSP functions

Automatic warnings for power and port failures*

Up to 2 Gigabit combo ports for high-speed and flexible uplinks*

Redundant power inputs* with a range from 9.6 to 60 VDC for higher reliability

Reliable operation in extreme cold and hot conditions

Ultra-compact Size

For easy deployment into cabinets

Building Field-proven and Error-free **Wireless** Networks

There is no need to suffer from unreliable wireless connections due to signal interference, weak signals, or slow failover. Moxa's AWK Series products provide field-proven wireless connectivity and innovative software features to optimize your wireless network for reliability, availability, and security.

AeroMag is a zero-configuration tool that optimizes your WLAN operations all the way from deployment, to operation, to troubleshooting in just a few clicks. The MXview Wireless module for MXview offers real-time visibility of your wireless network through a dynamic topology for more efficient monitoring and troubleshooting. By combining enhanced network security and a hardened design fit for extreme conditions, Moxa's AWK Series provides field-proven Wi-Fi connectivity to meet the requirements of various mission-critical applications.

Availability

- Turbo Roaming for fast handovers under 150 ms
- AeroMag for error-free WLAN deployment and adaptation
- Supports MXview Wireless for dynamic monitoring and roaming playback

Reliability

- 500-V insulation on power inputs
- Level-4 ESD protection on antenna ports
- Anti-vibration design
- -40 to 75°C operating temperature (-T models)

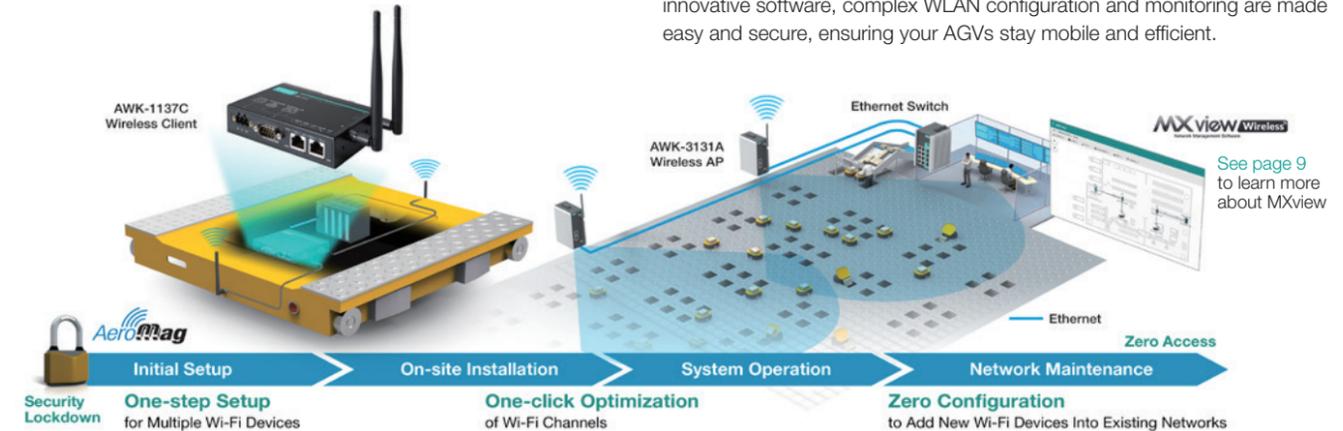

Security

- Reinforced device-level access control based on the IEC 62443 standard
- Supports the latest iteration of WPA2
- Supports HTTPS/SSL, RADIUS, and SSH
- Supports ICMP and filtering based on MAC address, IP protocol, and ports

Keep Your AGVs on Track With Automatic Wi-Fi Adaptation and Optimization

AGV systems rely on seamless Wi-Fi connectivity while on the move. For AGV system operators with limited IT knowledge, configuring wireless devices and performing WLAN maintenance can be quite daunting.

To address these challenges, Moxa provides the tools to build fast, secure, and seamless Wi-Fi networks that meet the demands of your AGV applications. Our AWK Series provides field-proven Wi-Fi capability that can withstand noise, vibration, and extreme temperatures. Leveraging our innovative software, complex WLAN configuration and monitoring are made easy and secure, ensuring your AGVs stay mobile and efficient.

Enable **Smart** Railways With Ethernet

Moxa provides Ethernet-compliant railway solutions for onboard, train-to-ground, and wayside communication and control systems that enhance operational capacity, efficiency, and passenger services.

Using divergent networks to provide multiple services in railway systems can be costly and cumbersome to deploy, maintain, and scale.

► Moxa Offers

- EN 50155 proven reliability from trains to tracks
- Ethernet compatibility across different train builders
- One-stop-shop wired and wireless portfolios
- Quality based on IRIS Rev. 0.3 certification

Ethernet-connected Onboard Networks

Moxa's EN 50155 Ethernet solutions enable high-bandwidth communications for CCTV, passenger information systems (PIS), passenger Wi-Fi, and other train-wide communication services in space-constrained onboard environments.

In substation automation systems (SAS), network devices that were released at different times and from different vendors may lack interoperability, which results in reduced performance and increases operating costs and risks.

► **Moxa Offers**

- IEC 61850-3 Ethernet switches for vendor-independent interoperability
- High bandwidth and high port density options
- Maximum reliability and availability
- Security features based on the IEC 62443 standard

Embrace IEC 61850 Infrastructure for Future-proof Substations

Moxa's PT-G7828/G7728 switches are designed in accordance with IEC 61850-3 Edition 2 Class 2 and IEEE 1613 Class 2 standards. The switches integrate cutting-edge hardware and software functions to optimize system availability and interoperability for substation automation systems (SAS).

The modular switches offer up to 28-port full Gigabit routing and switching with selectable RJ45/SFP/PoE+ interfaces and dual power modules for various applications.

Embedded with the innovative GOOSE Check feature, MMS server capability, and nanosecond-level time synchronization, the PT-G7828/G7728 switches ensure the accuracy of time-critical operations in power substations.

MMS for Power SCADA Supervision

With a built-in MMS server, the PT-G7828/G7728 switches can be controlled, monitored, and managed via the centralized power SCADA system for enhanced efficiency and availability.

The screenshot above from the management console of Moxa's PT-G7828/G7728 switches shows the system displaying the status of Ethernet ports managed and monitored by MMS.

► **Use Case**

Gigabit PTP Switches for Smart Substation Maintenance

In order to maintain bay-level changes with minimal modifications to the core infrastructure, the substation managers use PT-G7728 full Gigabit modular switches to enhance backbone aggregation capability, providing sufficient bandwidth to bridge distributed feeder protection bays.

Why PT-G7728 Switches

- 28 Gigabit ports for dynamic traffic flows
- Hot-swappable modularity for scalable expansion with minimum MTTR (mean time to repair) values

GOOSE Check

The PT-G7828/G7728 switches feature a GOOSE Check function that monitors GOOSE packets, and sends alerts to the power SCADA and NMS systems immediately when any time-out or tampered GOOSE packets are detected.

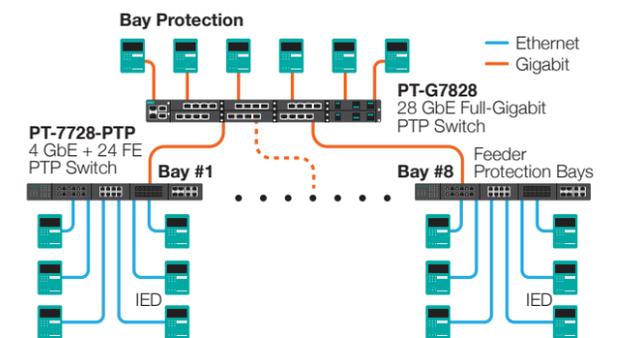

Together with GOOSE Lock that forms an allowlist of legitimate GOOSE packets, the PT-G7728/G7828 can block malicious traffic to defend the network.

Extend Ethernet Over Existing Copper Wires

As an alternative to investing in new cables for system upgrades, Moxa's IEX-402 Series Ethernet extenders provide users with greater flexibility for using existing copper wires to link devices together over long distances, saving users significant time and money.

Easy Installation

Supports an automatic CO/CPE negotiation function that enables plug-and-play, and is configuration-free for easy deployment.

High Reliability

The IEX-402 Series supports link fault pass-through (LFPT) and can interoperate with Turbo Ring and Turbo Chain.

Easy Management

The Ethernet extenders have LED indicators for on-site troubleshooting. Users can also remotely manage the connection status via MXview network management software.

Building a Subsea Oil and Gas Control Application With Industry-specific Cables

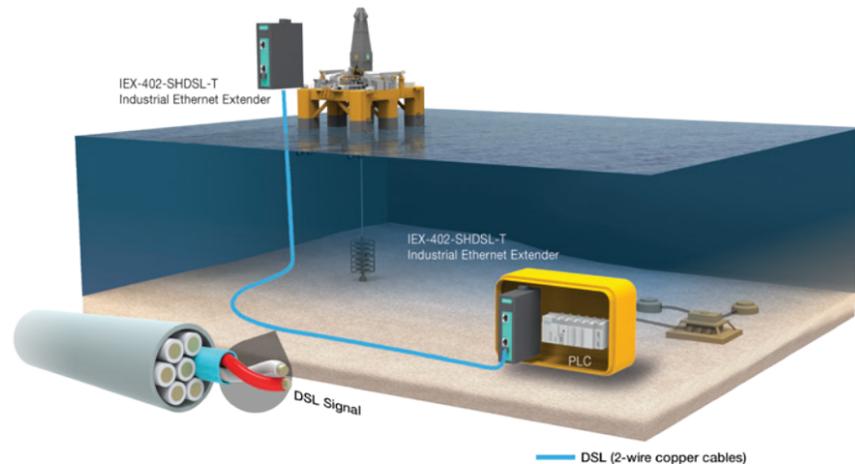

For subsea control applications, great efforts are made to install industry-specific cables under the sea. In this project, the most important requirement is to leverage the existing infrastructure to reduce costs and time spent on installing cables. The installation must be quick and support remote management in extremely hazardous environments.

System Requirements

- Utilize existing industry-specific wires under the sea to lower the risk of damaging cables
- Easy installation, diagnosis, and management
- Reliable operation in harsh environments

Why Moxa

- The IEX-402 Series allows users to extend Ethernet over existing industry-specific cables
- Easy installation with auto CO/CPE negotiation
- -40 to 75°C operating temperature and rugged design for harsh environments

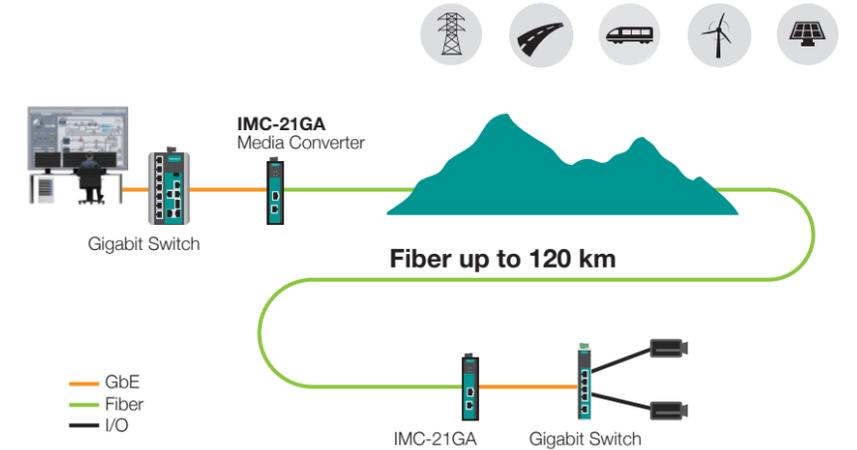

Optical fiber can upgrade Ethernet connections in terms of throughput, distance, and reliability.

Extend the Distance of Ethernet Over Fiber

Moxa offers industrial media converters that provide copper-to-fiber Gigabit-speed extensions of up to 120 km over single-mode fiber in harsh conditions.

Moxa's Ethernet-to-fiber media converters feature innovative link fault pass-through, relay output, industrial-grade reliability, and a compact design to withstand industrial environments.

Both IMC-101G and IMC-21GA fiber converters are perfect for megapixel machine vision inspection, public IP surveillance, and outdoor applications that require Gigabit throughput and EMI immunity with fewer hops regardless of distance.

Long-haul Options

- The IMC-21GA supports Gigabit single/multi-mode models with an SC connector and SFP slot for flexible deployment from 0.5 to 120 km
- The IMC-101G supports single-mode fiber for data transmissions up to 120 km

Easy Maintenance

- Link fault pass-through to easily trace network link failures
- A compact size and DIN-rail mounting for easy installation
- LED indicators for easy maintenance

Industrial Reliability

- Power failure and port break alarms by relay output
- Redundant power inputs
- -40 to 75°C operating temperature
- Industrial certifications for hazardous locations
